Re: Animals (Article 161) and Reportable Diseases and Conditions (Article 11) Proposed Rules/Ferrets

Dear Commissioners:

I want to support amendments to the above Articles to allow neutered/spayed domestic ferrets in New York City and to require they are vaccinated for rabies.

I care about ferret welfare. Domestic ferrets are not a risk to the public. They are nice pets for owners who understand their needs.

Pet store personnel, especially in chain stores, do not properly educate customers when they sell ferrets. I do not think they should be sold in any stores. The best way to get a ferret is to adopt it from a humane society or ferret shelter where they know a lot more about them and teach people to care for them well.

Thank you.
